IMPORTANT INFORMATION REGARDING DELHI SEROSURVEY Titled with Subject as 'Prevalence and Trends of SARS CoV2 infection in Delhi: a population based sero epidemiological study'.

1. The reports of the samples taken from the study participants have been sent back to the districts and thereby to the respective dispensaries, from where the samples were collected. The participants may please request their respective dispensaries to give the reports to them
2. 'Positive' for antibodies in the report may be interpreted as presence of antibodies against the SARS COV 2 infection and 'Negative' as no antibodies detected in the blood sample.
3. Anti-SARS-COV2 IgG is not useful for detecting acute infection. As per ICMR advisory, presence of IgG antibody indicates past infection.
